

Spring Roller Instructions Reverse Roll

The spring roller only works in one direction: the brackets must be reversed for the shade to roll AWAY from the glass.

Most common installation is the shade rolling towards the glass. The Spring Driver bracket (slot) is installed on the Left (from the inside looking out.)

Reverse roll: the shade rolls away from the glass into the room. Install the Spring Driver Bracket (slot) on the Right (inside looking out.)

Inside brackets: use the brackets supplied.

Universal brackets work equally as well for an inside mount, face mount, or ceiling mount. The safety lock will not function – use the hole and slot only.

Always check that the shade is secure in the brackets before using.
